## What is the film about?

The Human Trial puts a complex, human face on the clinical trial process. Documenting two patients as they undergo the first year of a clinical trial, the film showcases how scientists and patients work together to test a possible cure for diabetes – and the critical importance of that collaboration.

## What is a distributed classroom experience?

We also want to learn about this! It is a vision of the future of education in which the classroom experience is distributed across space and time without compromising learning. Join our activities to know more!
