

# “Aging” and “Value of life” from the viewpoint of terminal care

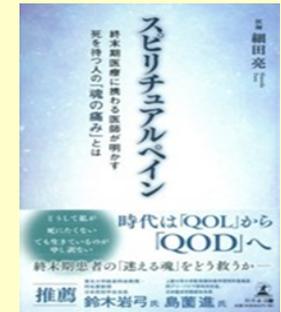

Guest Speaker: Dr. T. Hosoda (Kunugiyama Family Clinic)

- ✓ Modern medicine is approaching new historical turning point. Western medicine has been progressed and developed by scientific analysis by segmentalizing human body; level of cells and genes. We have, however, reached over-imagined aging society as the result of such exploring and developed human health and long life. While the medicine has got over various diseases, it has not yet overcome aging. The goal of healthcare was forced to change its direction. People started to talk about “Quality of Life” rather than extending life, and process for considering about more important issues than life has been emphasized in terminal care stage.
- ✓ Among such turning point of modern medicine, it would be worthwhile for all of us to think (1) how “science” can approach such “aging” in the phase of turning point of modern medicine and (2) “value of life” which may direct future science.

【Date etc.】 (Language: Japanese)

**22/DEC (Tue) 18:00-20:00**

@Zoom

Although any of Tokyo Tech students, graduates or undergraduates, can apply the program, we will stop accepting applications once all the seats are taken.
