

## Appendix 1: Supplementary Explanation regarding Grade Point Average

If the applicant wishes to do preliminary calculation of their grade point average before applying for the scholarship, please use the information below as a reference. However, please note that the grade point average which is actually used in the selection process will be calculated by Tokyo Tech, and Tokyo Tech does not answer to any requests to calculate the grade point average for the applicant to know if they are eligible to apply for the scholarship.

The student's grade point average should be calculated using only grades obtained as a student in a degree program (those obtained as a research student or as a student at a Japanese language school should not be included).

Use the conversion table below to convert course grades to grade points, which can then be used in the grade point average formula to calculate the GPA (round off to two decimal places).

Grade Conversion Table (for example)

Grading system	Grade				
Four level scale		優	良	可	不可
Four level scale		A	B	C	F
Four level scale		100–80	79–70	69–60	≤59
Five level scale	S	A	B	C	F
Five level scale	A	B	C	D	F
Five level scale	100–90	89–80	79–70	69–60	≤59
Grade point (GP)	3	3	2	1	0

Grade point average formula (MEXT)

$$\text{GPA} = ([\text{No. of GP3 credits} \times 3] + [\text{No. of GP2 credits} \times 2] + [\text{No. of GP1 credits} \times 1] + [\text{No. of GP0 credits} \times 0]) / \text{Total number of registered credits}$$

In this formula, the “No. of GPx credits” refers to the sum of credits from courses with a grade point of x.

Notes:

- 1) If any course was taken for a grade on a non-credit basis, count the number of credits

for that course as “1.”

- 2) In the case of transfer students, calculate based on credits obtained after transferring.
- 3) Results that cannot be converted to GP (e.g., coursework evaluated as “pass” or “approved”) should be excluded from calculation even if credits were obtained.
- 4) Round off the GPA to the third decimal place.
