

Graduate Major in Earth and Planetary Sciences

【Master's Degree Program】

1. Outline

Phenomena covered by earth and planetary sciences are complex combinations of various factors ranging from nano- to tera-scale in space and time. This program provides a variety of learning opportunities to foster human resources challenging and solving such global and planetary-scale problems with scientific thinking and skills.

2. Competencies Developed

Students in this program are expected to acquire following abilities:

- Ability to get insight into the nature of complex phenomena in the earth and planets
- Ability to set a subject of research and to form a research plan
- Ability to build own expertise necessary for research accomplishment
- Ability to present research achievements and take an international leadership in an area of expertise

3. Learning Goals

Students in this program are expected to study by utilizing the following opportunities to obtain the abilities mentioned above:

- A) Laboratory seminar to learn basics of scientific approaches in earth and planetary sciences
- B) Interdisciplinary seminars to study a wide range of research topics
- C) Lectures and exercise lessons to improve basic academic skills

4. IGP Completion Requirements

The following requirements must be met to complete the Master's Degree Program of this major.

1. Attain a total of 30 credits or more from 400- and 500-level courses.
2. Fulfill requirements in Table M1 below.
3. Pass the master's dissertation review and defense.

Table M1 shows course categories and the number of credits required to complete the Master's Degree Program of this major. It also shows the required minimum credits in each course category and points to be noted when selecting the required courses and electives.

The learning goals to be obtained by students through courses are listed as “associated learning goals”. Prior to registering courses, students need to fully understand the course goals.

Table M1. Graduate Major in Earth and Planetary Sciences Completion Requirements

Course category		<Required courses> Required credits	<Electives> Minimum credits required	Minimum credits required	Associated learning goals	Comments
Liberal arts and basic science courses	Humanities and social science courses		• 2 credits from 400-level • 1 credit from 500-level	5 credits	C	
	Career development courses		2 credits		C	All Graduate Attributes (GA) should be acquired. (Refer to Section 7 for the definition of GA.)
	Other courses					
Core courses	Research seminars	Seminar in Earth and Planetary Sciences S1 Seminar in Earth and Planetary Sciences F1 Seminar in Earth and Planetary Sciences S2 Seminar in Earth and Planetary Sciences F2 A total of 8 credits, 2 credit each from the above courses.		22 credits	B	
	Research-related courses		4 credits, 1 credit each from sub-groups B, C, D, and E		A, B	
	Major courses		10 credits from sub-group A		A	
Total required credits		A minimum of 30 credits including those attained according to the above conditions				
Note		• Japanese Language and Culture Courses offered to international students can be recognized as equivalent to the Humanities and Social Science Courses of the corresponding course level. • For details of the Liberal Arts and Basic Science Courses, please refer to the relevant sections.				

5. IGP Courses

Table M2 shows the Core Courses of the Master's Degree Program in this major. Graduate Majors listed in the Comments column offer core courses that are recognized as equivalent to the corresponding Major Courses or Research-related Courses in the standard curriculum of this major.

Table M2. Core Courses of the Graduate Major in Earth and Planetary Sciences

Course category		Course number	Course title			Credits	Comp etencie s	Learning goals	Comments

Note :

- ◎ : Required course, ○ : Restricted elective, ★ : Classes in English
- Competencies: 1 = Specialist skills, 2 = Liberal arts skills, 3 = Communication skills, 4 = Applied skills (inquisitive thinking and/or problem-finding skills), 5 = Applied skills (practical and/or problem-solving skills)
- 【 】 Course offered by another graduate major
- The character preceding the three digits in the course number denotes the course's subdiscipline (i.e., "D" represents the subdiscipline code in the course number ABC.D400.R): A (Advanced), C (Career), Z (Research seminars)

6. IGP Courses That Can Be Counted as Humanities and Social Science Courses

None

7. IGP Career Development Courses and IGP Courses That Can Be Counted as Career Development Courses

In order to fulfill the completion requirements for the master's degree program, students must attain at least 2 credits in Career Development Courses, and should satisfy all of the Graduate Attributes (GA) specified in Table MA-1 of the "Career Development Courses" listed as one of the "Liberal Arts and Basic Science Courses" in the Guide to Graduate Education and International Graduate Program, as well as shown below. Students will be evaluated in regards to GA achievements at the time of their degree completion. As to the courses with two GAs, both GAs stipulated for the courses are considered to be acquired if students receive the corresponding credits for those courses.

Career Development Courses and Major Courses that enable students to acquire GA and that are recognized as equivalent to Career Development Courses, offered by the Graduate Major, are listed in Table M3 below. Students can also acquire GA and credits by taking the Career Development Courses offered by Innovator and Inventor Development Platform (IIDP) listed as one of the "Liberal Arts and Basic Science Courses" in the Guide to Graduate Education and International Graduate Program.

However, it must be noted that credits attained from those courses that can be counted as Career Development Courses can be counted towards the completion requirements of master's degree program, either for the Major Courses or for the Career Development Courses (i.e., not for both). Nevertheless, even in the cases from those mentioned above where attained credits pertaining to these courses are not considered as Career Development Courses, their associated GAs may be considered by the Graduate Major to have been acquired.

For Graduate Attributes, refer to the Guide to the Career Development Courses.

The Graduate Attributes of the Master's Degree Program are listed in Table MA-1 as follows:

GA0M: You can clearly plan your own career and recognize the abilities necessary for realizing it while considering ethics and relevance to societal problems.

GA1M: You can acquire the knowledge, skills, and ethics necessary for realizing your planned career and contribute to societal problem-solving while collaborating with other experts.

Table M3. Courses of the Graduate Major in Earth and Planetary Sciences recognized as equivalent to Career Development Courses, and Career Development Courses

10. Research Related to the Completion of Master's Theses

In the master thesis research, students experience the research process through the small-group specialized instruction in each laboratory promoting cutting-edge research and develop their own skills in problem establishment, problem solving and communication through preparation of theses.

Study plan

1Q	2Q	3Q	4Q	5Q	6Q	7Q	8Q

Orientation

Application for degree

Thesis submission/defense

• The criteria for examination

Following requirements must be met.

1. On the research content
The content should be the level that contributes to the progress in relevant research field.
2. On the thesis
It includes an adequate review of the relevant research field. The relative position of the research in the field needs to be clear.

• The thesis review procedure

The review committee consists of at least three faculty members of the earth and planetary sciences course. The final judgment is carried out after reviewing the thesis and the presentation by the candidate. The examination for candidate who enters the PhD course is made by at least five faculty members.

11. Seamless Transition Between Degree Programs

The course program is constructed in order that students can satisfactorily advance their research from the global point of view on the basis of the basic, advanced and cutting-edge knowledge that they learned in the master course. The curriculum includes advanced training courses for research presentation and writing of paper, and courses for the support of overseas research activities and those for training for organizing international conferences.

- Deep understanding in earth and planetary sciences acquired by exploring the fundamental laws and principles in the earth and planets.
- Competency to create new knowledge and to transmit it.
- Competency to lead research frontiers in earth and planetary sciences with deep insight and ethical perspective.
- Competency to show international leadership in specialized research fields.

As shown in Table D2, the PhD curriculum provides practical major courses of 600-level as those which support domestic and overseas research activities, bearing the internationalization in mind. Advancing major courses of 400- and 500-levels, the PhD curriculum aims to foster researchers who are active in the world.

【Doctoral Degree Program】

1. Outline

Phenomena covered by earth and planetary sciences are complex combinations of various factors ranging from nano- to tera-scale in space and time. This program provides a variety of learning opportunities to foster human resources challenging and solving such global and planetary-scale problems with scientific thinking and skills.

2. Competencies Developed

Students in this program are expected to acquire following abilities:

- Ability to get insight into the nature of complex phenomena in the earth and planets
- Ability to set a subject of research and to form a research plan
- Ability to build own expertise necessary for research accomplishment
- Ability to present research achievements and take an international leadership in an area of expertise

3. Learning Goals

Students in this program are expected to study by utilizing the following opportunities to obtain the abilities mentioned above:

- A) Intensive courses that learn a wide range of advanced research topics on earth and planetary sciences
- B) Laboratory seminars, lectures, and exercise lessons that learn basic and applied research skills
- C) Classes that improve English skills and teaching skills and that learn career development

4. IGP Completion Requirements

The following requirements must be met to complete the Doctoral Degree Program of this major.

1. Attain a total of 24 credits or more from 600-level courses.
2. Fulfill requirements in Table D1 below.
3. Pass the doctoral dissertation review and defense.

Table D1 shows course categories and the number of credits required to complete the Doctoral Degree Program of this major. It also shows the required minimum credits in each course category and points to be noted when selecting the required courses and electives.

The learning goals to be obtained by students through courses are listed as “associated learning goals”. Prior to registering courses, students need to fully understand the course goals.

Table D1. Graduate Major in Earth and Planetary Sciences Completion Requirements

6. IGP Courses That Can Be Counted as Humanities and Social Science Courses

None

7. IGP Career Development Courses and IGP Courses That Can Be Counted as Career Development Courses

In order to fulfill the completion requirements for the doctoral degree program, students must attain at least 4 credits in Career

Development Courses, and should satisfy all of the Graduate Attributes (GA) specified in Table A-1 of the “Career Development Courses” listed as one of the “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program, as well as shown below. Students will be evaluated in regards to GA achievements at the time of their degree completion. As to the courses with two GAs, both GAs stipulated for the courses are considered to be acquired if students receive the corresponding credits for those courses.

Career Development Courses and Major Courses that enable students to acquire GA and that are recognized as equivalent to Career Development Courses, offered by the Graduate Major, are listed in Tables D3 below. Students can also acquire GA and credits by taking the Career Development Courses offered by Innovator and Inventor Development Platform (IIDP) listed as one of the “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program.

However, it must be noted that credits attained from those courses that can be counted as Career Development Courses can be counted towards the completion requirements of doctoral degree program, either for the Major Courses or for the Career Development Courses (i.e., not for both). Nevertheless, even in the cases from those mentioned above where attained credits pertaining to these courses are not considered as Career Development Courses, their associated GAs may be considered by the Graduate Major to have been acquired.

For Graduate Attributes, refer to the Guide to the Career Development Courses.

The Graduate Attributes of the Doctoral Degree Program are listed in Table A-1 as follows:

GA0D: You can clearly design your own career and contribute to realizing scientific, technological, or social innovation through a comprehensive understanding of the knowledge, skills, social responsibilities and ethics required to become an active member of academia and/or industry.

GA1D: You can lead in realizing scientific, technological, or social innovation by acquiring the advanced leadership skills, entrepreneurial skills, knowledge and expertise, and by developing social responsibility necessary for materializing your designed career.

Table D3. Courses of the Graduate Major in Earth and Planetary Sciences recognized as equivalent to Career Development Courses

Course category	Course number	Course title	Credits	GA*	Learning goals	Comments
Courses that can be counted as Career Development Courses	XIP.A601	★ Advanced International Practice in Science	1-0-0	GA1D		Common Course of School of Science <u>Outside the</u> Graduate Major in Earth and Planetary Sciences standard curriculum
	EPS.C628.L ~ EPS.C635.L	★ Cutting Edge Topics in Earth and Planetary Sciences I~P	0-1-0	GA1D	C	
	EPS.C638.L ~ EPS.C645.L	★ EPS Career Development I~P	0-1-0	GA0D, GA1D	C	

	EPS.C658.L ~ EPS.C665.L		★	EPS Tutorial I~P	0-1-0	GA1D	C	
Career Development Courses	EPS.C670.L			Doctoral Recurrent Program 2 of Earth and Planetary Sciences	0-0-2	GA0D GA1D		Career Development Course offered by the Graduate Major in Earth and Planetary Sciences. You cannot count for the Major Course.
	EPS.C680.L			Cooperative Education through Research Internships of (Earth and Planetary Sciences)	0-0-4	GA1D	C	Career Development Course offered by the Graduate Major in Earth and Planetary Sciences. You cannot count for the Major Course.
<p>★ : Classes in English</p> <p>Credits in Career Development Courses must be attained from among the above-listed courses and those listed as such in the Liberal Arts and Basic Science Courses Guide.</p> <p>* GA: Graduate Attributes</p>								

Students enrolled in the educational program for leading graduate schools, the Tokyo Tech Academy for Leadership (ToTAL) or WISE Programs may be offered courses recognized as equivalent to Career Development Courses besides those listed as such in the “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program. For details about available courses or completion requirements, please refer to the Study Guide of the Academy that offers the relevant program.

10. Research Related to the Completion of Doctoral Theses

Through the doctoral thesis research, the candidate must develop the abilities for pointing out the issues to be solved, analyzing the situations, and proposing the solution. At the same time, communication skills in English are also gained to publish research results in international journals.

Following requirements must be met for the qualification

- The thesis should be original and is confirmed to be the world level of research which would contribute to the development of the field of earth and planetary sciences.
- At least one research paper, in which the candidate has a major contribution, is published or accepted in a refereed international journal.
- The candidate must have English ability to promote international collaborations.

The thesis review procedure

Preliminary evaluations of the submitted thesis are carried out on the basis of a hearing of the thesis presentation and the contents of the thesis. When the thesis passes the preliminary screening, the candidate submits a complete version of the thesis to the review committee. After the thesis presentation by the candidate, the thesis is reviewed by the committee and the final exam follows. The review committee consists of at least five faculty members in the Earth and Planetary Sciences course.
