

Graduate Major in Physics

【Master's Degree Program】

1. Outline

The physics course aims to explore the fundamental laws and principles underlying physical phenomena and understand elementary particles, nuclei to universe in unified framework, and also to explore new substances and investigate the structural and physical properties of substances. This program aims to foster the flexible and creative human resources with the sound knowledge of physics, as researchers, teachers and engineers.

A systematic curriculum is provided in order that students can learn the general knowledge of physics and can make research of specialized fields through seminars and experiments under the instruction of their supervisors. An opportunity for research and education in partnership with other universities and research institutes is also provided. This program is composed of “class subjects” to learn systematically the advanced knowledge and technique for physics and skills of international communication and leadership, and “supervision” to be grounded researchers.

2. Competencies Developed

- Academic competency required for multifaceted understanding to physical phenomena.
- Practical competency to solve problems based on grounded knowledge of physics.
- Competency to explore the fundamental laws and principles underlying physical phenomena.
- Language competency and competency to discuss required for international research activities.
- Competency to conduct creative research with ethical perspective.

3. Learning Goals

The goals of the active learning provided in the course to obtain the competencies described in the curriculum are as follows:

- A) Mastery of deep understanding in physics and high-standard specialized knowledge through seminars and ones own study for the doctor thesis
- B) Mastery of skills to creatively establish and solve problems through the thesis study and small-group education in each state-of-the-art science laboratory
- C) Mastery of cutting-edge knowledge in intensive courses
- D) Mastery of practical skills for foreign language, academic presentations, and scientific communications through pragmatcal classes, colloquiums, and overseas visits
- E) Mastery of the leadership through the planning and arrangement of international research meetings

4. IGP Completion Requirements

The following requirements must be met to complete the Master's Degree Program of this major.

1. Attain a total of 30 credits or more from 400- and 500-level courses.
2. Meet the completion requirements from the courses specified in the Graduate Major in Physics curriculum (see Table M1 below).
 - 4 credits acquired from Research Seminars.
 - 2 credits for Colloquium in Physics I and II, and 8 credits or more from Exercises in Physics Course or Laboratory Work in Physics Course acquired from Research Related Courses.
 - A minimum of 23 credits acquired from major courses, including Research Seminars and Research Related Courses.
 - A minimum of 5 credits acquired from Liberal Arts and Basic Science Courses, including 2 credits or more from 400-level and one credit or more from 500-level Humanities and Social Science Courses, and 2 credits or more from Entrepreneurship Courses.
3. Pass the master's thesis review and defense.

Table M1 shows course categories and the number of credits required to complete the Master's Degree Program of this major. It also shows the required minimum credits in each course category and points to be noted when selecting the required courses and electives.

The learning goals to be obtained by students through courses are listed as “associated learning goals”. Prior to registering courses, students need to fully understand the course goals.

Table M1. Graduate Major in Physics Completion Requirements

Course category		<Required courses> Required credits	<Electives> Minimum credits required	Minimum credits required	Associated learning goals	Comments
Liberal arts and basic science courses	Humanities and social science courses		• 2 credits from 400-level • 1 credit from 500-level	5 credits		
	Entrepreneurship Courses		2 credits		D, E	All Graduate Attributes (GA) should be acquired. (Refer to Section 7 for the definition of GA.)
	Other courses					
Core courses	Research seminars	Research Seminar in Physics S1 Research Seminar in Physics F1 Research Seminar in Physics S2 Research Seminar in Physics F2 A total of 4 credits, 1 credit each from the above courses.		23 credits	A, B	
	Research-related courses	Colloquium in Physics I Colloquium in Physics II A total of 2 credits, 1 credit each from the above courses.	Exercises in Physics Course or Laboratory Work in Physics Course A total of 8 credits from either of the above courses.		C, D, E	
	Major courses				A, C, D, E	
	Major courses and Research-related courses					

	outside the Graduate Major in Physics standard curriculum					
Total required credits		A minimum of 30 credits including those attained according to the above conditions				
Note		• Japanese Language and Culture Courses offered to international students can be recognized as equivalent to the Humanities and Social Science Courses of the corresponding course level. • For details of the Liberal Arts and Basic Science Courses, please refer to the relevant sections.				

5. IGP Courses

Table M2 shows the Core Courses of the Master's Degree Program in this major. Graduate Majors listed in the Comments column offer core courses that are recognized as equivalent to the corresponding Major Courses or Research-related Courses in the standard curriculum of this major.

Table M2. Core Courses of the Graduate Major in Physics

- 【 】 Course offered by another graduate major
- The character preceding the three digits in the course number denotes the course's subdiscipline (i.e., "D" represents the subdiscipline code in the course number ABC.D400.R): C: Condensed matter physics, E: Electromagnetism, F: Fundamental physics, G: General, L: Laboratory, M: Mathematical physics, P: Common, Q: Quantum mechanics, R: Recurrent program, S: Statistical mechanics, T: Special Topics, Z: Research Seminars

6. IGP Courses That Can Be Counted as Humanities and Social Science Courses

None

7. IGP Entrepreneurship Courses and IGP Courses That Can Be Counted as Entrepreneurship Courses

In order to fulfill the completion requirements for the master's degree program, students must attain at least two credits in Entrepreneurship Courses, and should satisfy all of the Graduate Attributes (GAs) specified in Table M-1 of the "Entrepreneurship Courses" listed as "Liberal Arts and Basic Science Courses" in the Guide to Graduate Education and International Graduate Program, as well as shown below. Students will be evaluated in regards to GA achievements at the time of their degree completion. For courses with two GAs, both GAs stipulated for the courses are considered to be acquired if students attain the corresponding credits for those courses.

Entrepreneurship Courses and Major Courses that enable students to acquire GAs and are recognized as equivalent to Entrepreneurship Courses, offered by the Graduate Major, are listed in Table M3 below. Students can also acquire GAs and credits by taking the Entrepreneurship Courses offered by the Center for Entrepreneurship Education (CEE) listed as "Liberal Arts and Basic Science Courses" in the Guide to Graduate Education and International Graduate Program.

As there are some Entrepreneurship Courses without GAs, please check carefully before registering for them.

However, it must be noted that credits attained from courses that are recognized as equivalent to Entrepreneurship Courses can be counted towards the completion requirements of the master's degree program, either for Major Courses or for Entrepreneurship Courses (not for both). Nevertheless, even in cases where credits pertaining to courses that are not considered as Entrepreneurship Courses are attained, the associated GAs may be considered by the Graduate Major to have been acquired.

For Graduate Attributes, refer to the Guide to Entrepreneurship Courses.

The Graduate Attributes of the Master's Degree Program are listed in Table M-1 as follows:

GA0M: You can clearly plan your own career and recognize the abilities necessary for realizing it while considering ethics and relevance to societal problems.

GA1M: You can acquire the knowledge, skills, ethics and entrepreneurship necessary for realizing your planned career and contribute to societal problem-solving while collaborating with other experts

Table M3. Courses of the Graduate Major in Physics recognized as equivalent to Entrepreneurship Courses, and Entrepreneurship Courses

Course category	Course number	Course title		Credits	GA*	Learning goals	Comments
Courses that can be counted as Entrepreneurship Courses	XIP.A401		★	Special International Practice in Science	1-0-0	GA1M	Common Course of School of Science <u>Outside</u> the Graduate Major in Physics standard curriculum
	PHY.P413.L		★	Practical Exercises in International Research I	0-1-0	GA1M	D
	PHY.P414.L		★	Practical Exercises in International Research II	0-1-0	GA1M	D
	PHY.P415.L		★	Practical Exercises in Organizing International Conferences I	0-1-0	GA1M	D, E

Entrepreneurship Courses	PHY.R511			Master's Recurrent Program 1-1 of Physics Course	0-0-1	GA0M GA1M	Entrepreneurship Course offered by the Graduate Major in Physics. (Cannot be counted for Major Courses)
	PHY.R512			Master's Recurrent Program 1-2 of Physics Course	0-0-1	GA0M GA1M	Entrepreneurship Course offered by the Graduate Major in Physics. (Cannot be

							counted for Major Courses)
	PHY.R513			Master's Recurrent Program 2 of Physics Course	0-0-2	GA0M GA1M	Entrepreneurship Course offered by the Graduate Major in Physics. (Cannot be counted for Major Courses).

★ : Classes in English

Credits in Entrepreneurship Courses must be attained from among the above-listed courses and those listed as such in the Liberal Arts and Basic Science Courses Guide.

***GA: Graduate Attributes**

The Tokyo Tech Academy for Leadership (ToTAL), WISE Programs, or Center of Data Science and Artificial Intelligence may offer courses that are recognized as equivalent to Entrepreneurship Courses in addition to those listed as such under “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program. For details about available courses or completion requirements, please refer to the study guide of the academy or center that offers the relevant program.

10. Research Related to the Completion of Master Theses

In the master thesis research, students experience the research process through the small-group specialized instruction in each laboratory promoting cutting-edge research and develop their own skills in problem establishment, problem solving and communication through preparation of theses.

Study Plan

• The criteria for examination

Following requirements must be met.

1. On the research content
The content should be the level that contributes the progress in relevant research field.
2. On the thesis
It includes an adequate review of the relevant research field. The relative position of the research in the field needs to be clear. It should include an English abstract in about 1 page A4 format.

• The thesis review procedure

The review committee consists of at least three faculty members of the physics course. The final judgment is carried out after reviewing the thesis and the presentation by the candidate. The examination for candidate who enters the PhD course is made by at least five faculty members.

11. Seamless Transition Between Degree Programs

The course program is constructed in order that students can satisfactorily advance their research from the global point of view on the basis of the basic, advanced and cutting-edge knowledge that they learned in the master course. The curriculum includes advanced training courses for research presentation and writing of paper, and courses for the support of overseas research activities and those for training for organizing international conferences.

- Deep understanding in physics acquired by exploring the fundamental laws and principles underlying physical phenomena.
- Competency to penetrate the essence and universality in physical phenomena and that to discover and explore new problems
- Competency to create new knowledge and that to transmit it.
- Competency to lead research frontiers in physics with deep insight and ethical perspective.
- Competency to relate organically physics and other research fields and that to make practical use of the relation.
- Competency to show international leadership in specialized research fields.

As shown in Table D2, the PhD curriculum provides practical major courses of 600-level as those which support domestic and overseas research activities, bearing the internationalization in mind. Advancing major courses of 400- and 500-levels, the PhD curriculum aims to foster researchers who are active in the world.

【Doctoral Degree Program】

1. Outline

This program aims to foster the human resources who can contribute to the progress of the society and the development of natural science. We expect the students to become the leaders in the fundamental natural science field, and to preserve and develop the science with uninhibited ideas and intellectual curiosities.

2. Competencies Developed

The program focuses on the academic development of the following competencies, and sets the higher standard than that in the master course.

- Competency to create and send out new findings based on the broad and systematic knowledge of natural science
- Competency to discover and explore new subjects with deep considerations of the essence and universality
- Competency to lead the forefront of natural science with deep insight and noble ethics
- Competency to organically combine and utilize the knowledge of natural science and broad spectrum of understandings in other fields
- Competency to take the initiative in ones special research area of natural science

3. Learning Goals

The goals of the active learning provided in the course to obtain the competencies described in the curriculum are as follows:

- A) Mastery of deep understanding in physics and high-standard specialized knowledge through seminars and ones own study for the doctor thesis
- B) Mastery of skills to creatively establish and solve problems through the thesis study and small-group education in each state-of-the-art science laboratory
- C) Mastery of cutting-edge knowledge in intensive courses
- D) Mastery of practical skills for foreign language, academic presentations, and scientific communications through pragmatical classes, colloquiums, and overseas visits
- E) Mastery of the leadership through the planning and arrangement of international research meetings

4. IGP Completion Requirements

The following requirements must be met to complete the Doctoral Degree Program of the physics course.

1. Attain a total of 24 credits or more from 600-level courses.
2. Meet the completion requirements from the courses specified in the Graduate Major in Physics curriculum (see Table D1 below),
 - a minimum of 12 credits acquired from Major Courses, including 12 credits acquired from Research Seminars ; and
 - a minimum of 6 credits acquired from Liberal Arts and Basic Science Courses (2 credits from Humanities and Social Science Courses, and 4 credits from Entrepreneurship Courses).
3. Pass the doctoral thesis review and defense.

Table D1 shows course categories and the number of credits required to complete the Doctoral Degree Program of this major. It also shows the required minimum credits in each course category and points to be noted when selecting the required courses and electives.

The learning goals to be obtained by students through courses are listed as “associated learning goals”. Prior to registering courses, students need to fully understand the course goals.

Table D1. Graduate Major in Physics Completion Requirements

Course category		<Required courses> Required credits	<Electives> Minimum credits required	Minimum credits required	Associated learning goals	Comments
Liberal arts and basic science courses	Humanities and social science courses		2 credits	6 credits		
	Entrepreneurship Courses		4 credits		D, E	All Graduate Attributes (GA) should be acquired. (Refer to Section 7 for the definition of GA.)
	Other courses					
Core courses	Research seminars	Seminar in Physics S3 Seminar in Physics F3 Seminar in Physics S4 Seminar in Physics F4 Seminar in Physics S5 Seminar in Physics F5 A total of 12 credits, 2 credits each from the above courses.		12 credits	A, B	
	Research-related courses					
	Major courses				C, D, E	
	Major courses and Research-related courses <u>outside</u> the Graduate Major in Physics standard curriculum					
Total required credits		A minimum of 24 credits including those attained according to the above conditions				
Note		• Japanese Language and Culture Courses offered to international students can be recognized as equivalent to the Humanities and Social Science Courses of the corresponding course level. • For details of the Liberal Arts and Basic Science Courses, please refer to the relevant sections.				

5. IGP Courses

Table D2 shows the Core Courses of the Doctoral Degree Program of this major. Graduate Majors listed in the Comments column offer core courses that are recognized as equivalent to the corresponding Major Courses or Research-related Courses in the standard curriculum of this major.

Table D2. Core Courses of the Graduate Major in Physics

Note :

- ◎ : Required course, ○ : Restricted elective, ★ : Classes in English
- Competencies: 1 = Specialist skills, 2 = Liberal arts skills, 3 = Communication skills, 4 = Applied skills (inquisitive thinking and/or problem-finding skills), 5 = Applied skills (practical and/or problem-solving skills)
- The character preceding the three digits in the course number denotes the course's subdiscipline (i.e., "D" represents the subdiscipline code in the course number ABC.D600.R): C: Condensed matter physics, E: Electromagnetism, F: Fundamental physics, G: General, L: Laboratory, M: Mathematical physics, P: Common, Q: Quantum mechanics, R: Recurrent program, S: Statistical mechanics, T: Special Topics, Z: Research

6. IGP Courses That Can Be Counted as Humanities and Social Science Courses

None

7. IGP Entrepreneurship Courses and IGP Courses That Can Be Counted as Entrepreneurship Courses

In order to fulfill the completion requirements for the doctoral degree program, students must attain at least four credits in Entrepreneurship Courses, and should satisfy all of the Graduate Attributes (GAs) specified in Table D-1 of the “Entrepreneurship Courses” listed as “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program, as well as shown below. Students will be evaluated in regards to GA achievements at the time of their degree completion. For courses with two GAs, both GAs stipulated for the courses are considered to be acquired if students attain the corresponding credits for those courses.

Entrepreneurship Courses and Major Courses that enable students to acquire GAs and are recognized as equivalent to Entrepreneurship Courses, offered by the Graduate Major, are listed in Table D3 below. Students can also acquire GAs and credits by taking the Entrepreneurship Courses offered by the Center for Entrepreneurship Education (CEE) listed as “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program.

As there are some Entrepreneurship Courses without GAs, please check carefully before registering for them.

However, it must be noted that credits attained from courses that are recognized as Entrepreneurship Courses can be counted towards the completion requirements of the doctoral degree program, either for Major Courses or for Entrepreneurship Courses (not for both). Nevertheless, even in cases where credits pertaining to courses that are not considered as Entrepreneurship Courses are attained, the associated GAs may be considered by the Graduate Major to have been acquired.

For Graduate Attributes, refer to the Guide to Entrepreneurship Courses.

The Graduate Attributes of the Doctoral Degree Program are listed in Table D-1 as follows:

GA0D: You can clearly design your own career and contribute to realizing scientific, technological, or social innovation through a comprehensive understanding of the knowledge, skills, social responsibilities and ethics required to become an active member of academia and/or industry.

GA1D: You can lead in realizing scientific, technological, or social innovation by acquiring advanced leadership skills, entrepreneurship, knowledge and expertise, and by developing social responsibility necessary for materializing your designed career.

Table D3. Courses of the Graduate Major in Physics recognized as equivalent to Entrepreneurship Courses, and Entrepreneurship Courses

★ : Classes in English

Credits in Entrepreneurship Courses must be attained from among the above-listed courses and those listed as such in the Liberal Arts and Basic Science Courses Guide.

* GA: Graduate Attributes

The Tokyo Tech Academy for Leadership (ToTAL), WISE Programs, or Center of Data Science and Artificial Intelligence may offer courses that are recognized as equivalent to Entrepreneurship Courses in addition to those listed as such under “Liberal Arts and Basic Science Courses” in the Guide to Graduate Education and International Graduate Program. For details about available courses or completion requirements, please refer to the study guide of the academy or center that offers the relevant program.

10. Research Related to the Completion of Doctoral Theses

During the doctoral thesis research, students develop their own skills in setting up the subjects of significant importance and abilities to solve them. At the same time, communication skills in English are acquired.

In order to obtain the doctors degree, the thesis presentation and the final exam are required and are to be reviewed by referees.

The criteria for examination

Following requirements must be met for the qualification

1. The contents of the work

The work is confirmed to be the world wide level of research which would contribute to the development of the field

2. The thesis

i) It contains an adequate review of the research field, described in plain language.

The relative position of the work in the specific field needs to be clear.

ii) It is written in English.

iii) A paper article to which the candidate has a major contribution is published in the international peer review journals, or the publication is confirmed *

* In the special case where the publication is foreseen to delay due to the editorial reason, the thesis can be approved if the paper is expected to be published within a year.

The thesis review procedure

The review committee consists of at least five faculty members in the physics course. After the thesis presentation by the candidate, the thesis is reviewed by the referees, and the final exam follows.
